

Shiatsu for Mental Health

TOUCH FOR LIFE

In a year that has disrupted routines, separated us from friends and family, and provoked a range of strong emotions, one thing is clear: we need touch, as a basic human necessity, as much as we need shelter, food and warmth.

Shiatsu touch and allied practices can be learned and practiced by anyone and shared with loved ones as a form of self-care.

From early December to the end of January the Shiatsu Society is releasing themed guides for your 'wellness survival kit' to support you and your family through the winter months.

What is Shiatsu?

Like our FB Page and follow on Insta so you don't miss the free resources we're releasing throughout Dec & Jan.

#touchforlife

Shiatsu touch is caring, compassionate, nourishing, respectful. It affects the body, mind and emotions.

Points and Practices for relieving anxiety & stress in mind & body

Seasonal nutrition

We often over-indulge in sugar and sweets at this time of year. This can lead to peaks and slumps in energy as our blood glucose fluctuates, leaving us agitated and physically stressed. Dried dates, unsulphured apricots, almonds, sunflower seeds and cashews make a delicious and nutritious alternative. Herb teas containing fennel or liquorice are sweet and relaxing.

Activity 1

'Alternate nostril breathing'

This technique activates the part of the nervous system that supports relaxation

- Close one nostril with your thumb; inhale deeply through the other nostril
- At peak inhalation, release your thumb and close the other nostril with your ring finger, then exhale.
- Breathe in through this nostril and repeat the process above, alternating your inhalation and exhalation between your nostrils

Acupressure

Guidance: Find the point, press as you breathe out, feel for warmth or tingling, and hold as long as it feels good. Press the points on both sides of the body.

HT7 & HP8: both calm the mind and reduce anxiety

Activity 2

Give yourself a hug

Giving yourself a hug can release oxytocin, the 'cuddle hormone', which is shown to lower stress and anxiety

LI4: letting go on all levels from headache to difficult situations. Don't use in pregnancy!
